

New Hope Lutheran Church

AV Tech System

YouTube Live Interface Setup, Operation, and Rebuild Guide

Companion documentation module for Stream Agent III sd

Prepared: May 19, 2026

Status: Working baseline documentation - update with actual YouTube Studio and OBS screenshots when available

Sensitive information note

This document intentionally does not include the YouTube stream key, YouTube account password, OBS WebSocket password, camera passwords, or recovery codes. Record those securely outside any public GitHub repository or printed public manual.

Contents

- Purpose and scope
- What YouTube Live is
- Why New Hope uses YouTube Live
- How YouTube fits into the AV tech system
- How OBS and Stream Agent III sd interface with YouTube
- Current YouTube interface requirements
- Accounts, software, and permissions
- Scheduled placeholder design
- Persistent stream key strategy
- OBS custom streaming settings
- Thumbnail workflow using Proclaim
- Description and public information workflow
- Auto-start and auto-stop
- Church website one-button viewer model
- Normal Sunday operation
- Rebuilding the YouTube interface after failure
- Backup and maintenance
- Troubleshooting
- Items to capture later with screenshots
- Appendices and references

1. Purpose and scope

This document explains the YouTube Live part of the New Hope Lutheran Church AV tech system. It is written so that a new volunteer, or a future maintainer, can understand what YouTube does, why it is needed, how OBS and Stream Agent III sd interact with it, and how to rebuild the YouTube livestream setup if the BeelinkOBS computer or configuration has to be replaced.

This is the YouTube-specific companion to the OBS Studio Setup, Operation, and Rebuild Guide. The OBS document explains the production and encoder side. This document explains the public YouTube destination, the scheduled live placeholder, the persistent/custom stream key, thumbnails, descriptions, auto-start, auto-stop, and viewer access through the church website.

- OBS = Open Broadcaster Software. OBS is the encoder that sends the final program feed to YouTube.
- RTMP / RTMPS = Real-Time Messaging Protocol / secure RTMP. This is the type of transport OBS uses to send the stream to YouTube.
- Stream key = the secret YouTube value that identifies and authorizes the incoming stream from OBS.
- Placeholder = the scheduled YouTube Live event that viewers see before OBS begins sending video.
- Auto-start = YouTube starts the scheduled live event when the OBS data stream arrives.
- Auto-stop = YouTube ends the scheduled live event when the OBS data stream stops.
- Proclaim = church presentation software used for service visuals and for producing thumbnail images.

Important mental model

YouTube does not switch cameras or build the service program. OBS builds the final program picture. Stream Agent III sd controls OBS. YouTube receives the final OBS data stream and presents it to public viewers.

2. What YouTube Live is

YouTube Live is the public delivery platform for the Sunday worship service. It receives an encoded live data stream from OBS, makes it available to viewers, and then stores the completed service as a video under the channel's Live content after the service ends.

In Google's terminology, the church uses an encoder workflow. YouTube Help documents that an encoder stream requires the YouTube Live server URL and stream key to be entered into the encoder. At New Hope, OBS is that encoder.

YouTube role	Meaning in the New Hope system
Public platform	Where online viewers watch the worship service.
Live ingest destination	Receives the audio/video data sent from OBS.
Scheduled event host	Holds the public placeholder page before the live data arrives.
Archive host	Stores the completed worship service after the stream ends.

Viewer access point	The target reached by the church website livestream button.
---------------------	---

3. Why New Hope uses YouTube Live

New Hope uses YouTube Live because it is familiar to viewers, works well across phones, tablets, computers, and smart TVs, and provides a public channel page where past services can also be found.

- Viewers do not need special church software to watch the service.
- The church can use a simple website button that points to the YouTube live channel/page.
- The completed service is automatically available later as a past livestream when YouTube archives it.
- The OBS encoder can use a persistent/custom stream key, reducing weekly setup changes.
- YouTube Studio provides a scheduled event placeholder with title, thumbnail, description, and start/stop behavior.

4. How YouTube fits into the AV tech system

YouTube sits at the public end of the AV tech system. Cameras, audio, slides, and automation are handled locally at the church. OBS sends one final program stream to YouTube. YouTube then handles public distribution to viewers.

Figure 1 - YouTube as the public live-delivery endpoint in the New Hope AV tech streaming system.

Figure 1 - YouTube as the public live-delivery endpoint in the New Hope AV tech streaming system.

5. How OBS and Stream Agent III sd interface with YouTube

OBS is the direct technical interface to YouTube. Stream Agent III sd controls OBS, but it does not send video to YouTube by itself. The YouTube side must be prepared in advance so that when OBS

New Hope Lutheran Church AV Tech - YouTube Live Interface Setup and Rebuild Guide
starts streaming, YouTube recognizes the incoming data stream and attaches it to the correct scheduled event.

Item	Current/expected value	Purpose
OBS streaming service	YouTube Live via custom RTMP/RTMPS setting	Sends the final program feed to YouTube.
YouTube stream key	Persistent/custom New Hope key - redacted	Allows OBS to reach the correct YouTube live destination.
OBS profile	NHLC live - confirm exact current profile name	Reduces risk of using the wrong stream destination.
Stream Agent role	Controls OBS start/stop and scene automation	Does not replace OBS as the encoder.
YouTube placeholder	Created separately in YouTube Studio	Public scheduled event seen by viewers before stream start.
Public live URL	https://www.youtube.com/@NewHopeLutheranChurchRegina/live	Used for the church website and Stream Agent View Live button.
Why preparation matters Stream Agent can start OBS streaming, but YouTube must already have the correct scheduled placeholder, stream key selection, visibility, auto-start, and auto-stop settings. Otherwise OBS may send data, but the public event may not behave as expected.		

6. Current YouTube interface requirements

The following values should be treated as part of the interface contract between OBS, Stream Agent III sd, YouTube Studio, and the church website.

YouTube / system item	Required / expected value	Used by
YouTube channel	New Hope Lutheran Church Regina - confirm exact channel name	Public viewers and YouTube Studio.
Public live page	https://www.youtube.com/@NewHopeLutheranChurchRegina/live	Church website button and Stream Agent View Live link.
Stream key type	Persistent/custom stream key	OBS stream settings and scheduled placeholder.
Live stream type	Scheduled encoder livestream	Sunday service placeholder.
Visibility	Public for normal Sunday service	Viewer access.
Auto-start	On	Lets OBS starting the data stream start the public event.
Auto-stop	On	Lets OBS stopping the data stream end the public event.
Live chat	Off / not used	Keeps the stream simple.

Comments	Accepted unless church policy changes	Allows normal post-stream comments.
Thumbnail source	Proclaim-created image in monthly PC folder	Public waiting page.
Description	Service information and welcome text	Public event information.

7. Accounts, software, and permissions

YouTube operation depends on both local software and the church YouTube account. Account credentials and recovery details must be stored securely and not inside this general documentation.

Item	Required for	Notes
Church YouTube account	Creating and managing scheduled live streams	Store login and recovery details securely. Do not print passwords in general volunteer material.
YouTube Studio access	Opening Live Control Room and Manage tab	Used to create and edit the Sunday placeholder.
OBS Studio	Encoding and sending the live stream	OBS stores the stream URL and persistent key.
Stream Agent III sd	Automation and Web HUD start/stop controls	Controls OBS but does not directly manage YouTube Studio.
Proclaim	Thumbnail creation and service visuals	Used to create monthly thumbnail images.
Internet access from BeelinkOBS	Sending stream to YouTube	Confirm before Sunday service.
Secure recovery storage	Stream key, account password, recovery codes	Keep outside public GitHub repositories and printed manuals.

8. Scheduled placeholder design

A scheduled placeholder is the YouTube Live event that exists before the actual live video arrives from OBS. It should contain the title, scheduled date/time, thumbnail, description, visibility, stream key association, and auto-start/auto-stop behavior.

Scheduled YouTube Placeholder Workflow

The placeholder exists before the live data arrives. Auto-start and auto-stop let OBS drive the public event.

Figure 2 - Sunday placeholder timing and auto-start/auto-stop relationship.

Figure 2 - Sunday placeholder timing and auto-start/auto-stop relationship.

8.1 New Hope placeholder settings

Setting area	New Hope practice	Reason
Title	Sunday service title with date/time	Lets viewers confirm they are in the correct place.
Visibility	Public for normal service	Allows public viewers to watch from the website link.
Thumbnail	Proclaim-produced Sunday image	Creates a clear waiting page.
Description	Brief service information	Explains the service focus and context.
Stream key	Persistent/custom church key	Matches the key stored in OBS.
Auto-start	Enabled	YouTube starts when OBS data arrives.
Auto-stop	Enabled	YouTube ends when OBS stops sending data.
Live chat	Disabled / not used	Keeps the setup simple and avoids chat moderation.
Comments	Allowed unless policy changes	Permits normal post-stream comments.
Extra features	No trailer, no polls, no Q&A, no frills	Keeps Sunday operation predictable.

8.2 Sunday morning timing

New Hope normally creates the scheduled placeholder on Sunday morning. This timing is connected to the church website one-button viewer model. The website points people to the YouTube live page rather than a unique weekly event URL.

Creating the placeholder Sunday morning gives viewers a current service waiting page close to service time, while reducing the chance that an upcoming placeholder blocks easy access to existing past livestreams under the channel's Live tab for too long.

Timing rule

The placeholder should be created early enough that viewers can find the current service before it begins, but not so early that it interferes with viewers looking for previous saved services.

9. Persistent stream key strategy

New Hope uses a persistent/custom stream key strategy. OBS normally keeps the same YouTube stream key from week to week. The YouTube scheduled placeholder is configured to use the same key. This reduces weekly setup work and reduces the chance of Sunday morning mistakes.

Risk with changing keys weekly	Result
Wrong key pasted into OBS	Stream may not reach the intended placeholder.
Key not updated	YouTube may not receive the stream.
Copy/paste or typing error	OBS connection failure or wrong destination.
Volunteer confusion	Sunday morning delay.
Key exposed in screenshots	Security problem because the stream key functions like a password.

Security rule

The YouTube stream key must be treated like a password. It can be stored in secure recovery records, but it should not appear in ordinary volunteer instructions, screenshots, GitHub repositories, or printed public manuals.

10. OBS custom streaming settings

OBS must be configured as the YouTube encoder. The live church system should be checked and the exact values recorded. Do not include the actual stream key in public documents.

OBS setting	Current / required value	Notes
Profile	NHLC live - confirm exact current name	Used to reduce risk of wrong stream destination.
Service	Custom or YouTube setting - confirm current working value	Use exactly what is proven in the church system.
Server URL	YouTube RTMP or RTMPS URL - confirm	RTMPS is preferred if supported and tested.
Stream key	Persistent New Hope key - redacted	Store securely only.
Output resolution	Record from OBS screenshot	Must match stable church streaming configuration.
Frame rate	Record from OBS screenshot	Must match stable church

		streaming configuration.
Video bitrate	Record from OBS screenshot	Should match available upload speed and YouTube recommendations.
Audio bitrate	Record from OBS screenshot	Record current stable value.
Audio sample rate	48 kHz expected in OBS	Confirm against OBS Audio settings.
RTMP / RTMPS note Google recommends RTMPS where supported because it encrypts the stream connection. If the present working New Hope setup uses ordinary RTMP, document it exactly and test any RTMPS change before relying on it for Sunday service.		

11. Thumbnail workflow using Proclaim

New Hope uses Proclaim to create the Sunday livestream thumbnail image. The thumbnail is the public still image shown on the YouTube waiting page before the service begins.

Thumbnail item	New Hope practice	Notes
Source program	Proclaim	Use a clean readable slide-style design.
Storage	Dedicated PC folder, organized by month	Makes Sunday selection faster and reduces mistakes.
Content	Church/channel name, service date, service time	Viewers can confirm they are in the correct service.
Aspect ratio	16:9	YouTube recommends 16:9 for players and previews.
File type	PNG or JPG preferred	YouTube Help lists JPG, GIF, and PNG as acceptable formats.
Naming convention	Include date in filename	Example: 2026-05-24_New_Hope_Service_10AM.png.

Example folder pattern:

C:\ChurchAutomation\YouTube_Thumbnails\2026-05 May\

Example file names:

2026-05-24_New_Hope_Service_10AM.png

2026-05-31_New_Hope_Service_10AM.png

12. Description and public information workflow

The YouTube description should tell viewers what the service is about without including internal AVTECH setup details. A simple template should be saved and reused, then adjusted for the date and service theme.

Description item	Example content	Notes
------------------	-----------------	-------

Service name	Sunday Worship Service	Use consistent naming.
Date/time	Sunday, May 24, 2026, 10:00 AM	Must match the scheduled event.
Church name	New Hope Lutheran Church	Public identification.
Theme / sermon focus	Brief statement of the service focus	Optional but useful.
Scripture / church season	Easter, Advent, Lent, Pentecost, etc.	Optional.
Welcome note	A brief welcome to online viewers	Keep concise.
Website/contact	Church website or contact link	Optional.
Public information rule Do not place stream keys, OBS profile notes, internal IP addresses, camera passwords, or troubleshooting details in the public YouTube description.		

13. Auto-start and auto-stop

Auto-start and auto-stop are critical to the New Hope one-button workflow. These settings allow the encoder behavior to control the public YouTube event.

YouTube setting	New Hope value	Meaning
Auto-start	On	When OBS begins sending the live data stream, YouTube starts the scheduled public live event.
Auto-stop	On	When OBS stops sending the live data stream, YouTube ends the live event.

13.1 What "start stream on occurrence of a data stream" means

The data stream is the encoded audio/video feed coming from OBS. Before OBS starts, the YouTube placeholder exists but has no live video feed. Viewers see the thumbnail and waiting page. When OBS starts streaming, it sends data to YouTube using the stream URL and stream key. With auto-start enabled, YouTube can start the public live event when that data arrives. When OBS stops sending data, auto-stop lets YouTube end the public event.

Critical Sunday check

If auto-start is off, OBS may be sending video while the public event does not go live automatically. If auto-stop is off, the public YouTube event may not end when OBS stops.

14. Church website one-button viewer model

New Hope uses a one-button viewer model. The church website directs viewers to the YouTube live page rather than requiring the website to be updated every week with a different event link.

Time / condition	What the viewer should see
------------------	----------------------------

Before Sunday placeholder is created	The channel live area and existing past livestreams remain available.
After Sunday placeholder is created	The viewer sees the upcoming service thumbnail/waiting page.
When OBS starts streaming	The same destination becomes the live worship service.
After OBS stops streaming	The completed service becomes available later as an archived livestream.

New Hope public live URL used by Stream Agent and the website workflow:

<https://www.youtube.com/@NewHopeLutheranChurchRegina/live>

15. Normal Sunday operation

1. Confirm the YouTube account is accessible and the correct church channel is selected.
2. Open YouTube Studio and go to Create -> Go Live.
3. Open the Manage tab and create or reuse a scheduled stream for the Sunday service.
4. Confirm title, service date, and service time.
5. Upload the correct Proclaim thumbnail from the monthly thumbnail folder.
6. Enter or update the service description.
7. Confirm visibility is Public for a real Sunday service.
8. Confirm the persistent/custom stream key selected in YouTube matches the key stored in OBS.
9. Confirm auto-start is On.
10. Confirm auto-stop is On.
11. Confirm live chat is Off / not used and comments are set according to church policy.
12. Save the scheduled stream.
13. Use the church website live button or the public live URL to verify the expected waiting-page thumbnail appears.
14. Before service, confirm OBS, Stream Agent III sd, Proclaim, cameras, audio, and network are ready.
15. At stream time, Stream Agent starts OBS streaming. YouTube should automatically start the scheduled event.
16. At the end of service, Stream Agent stops OBS streaming. YouTube should automatically end and archive the event.

16. Rebuilding the YouTube interface after failure

This procedure covers the YouTube-facing rebuild tasks after a PC failure, lost OBS profile, or major configuration recovery. It assumes the YouTube account is still available.

16.1 Best case: restore from backup

1. Restore OBS profile and scene collection from backup.
2. Confirm OBS Settings -> Stream still contains the correct YouTube server URL and persistent key.
3. Confirm Stream Agent III sd is restored and can start/stop OBS streaming.
4. Confirm the Stream Agent View Live button uses the correct New Hope public live URL.
5. Open YouTube Studio and create a private/unlisted test placeholder if appropriate.
6. Run a short test stream before relying on the rebuilt system for Sunday service.

16.2 Manual rebuild if no OBS backup exists

1. Install OBS Studio and required plugins as documented in the OBS guide.
2. Configure OBS streaming to the documented YouTube RTMP/RTMPS server URL.
3. Enter the persistent New Hope YouTube stream key from secure recovery storage.
4. Recreate or restore the OBS profile name used by Stream Agent profile safety.
5. Confirm OBS can start a test stream to YouTube using an unlisted/private placeholder.
6. Create the next Sunday scheduled placeholder in YouTube Studio.
7. Attach/select the persistent/custom stream key for that placeholder.
8. Apply the thumbnail, description, date/time, visibility, auto-start, auto-stop, chat, and comments settings.
9. Verify the public live URL reaches the expected waiting page.

16.3 If YouTube account access is lost

1. Use the secure recovery records for the church YouTube/Google account.
2. Recover access through the approved church account owner or administrator.
3. Do not create a new public channel unless leadership decides the old channel cannot be recovered.
4. If a new channel is unavoidable, update the church website link, Stream Agent View Live URL, documentation, and volunteer instructions.

17. Backup and maintenance

Backups and records are what make YouTube setup recoverable. The stream key and account details are sensitive and must be stored separately from public documentation.

Backup / record item	How / where	When
YouTube account access records	Secure church password/recovery storage	After any account change.
Stream key name and value	Secure recovery storage only	After any stream key change.
OBS stream settings screenshot	Documentation folder with key	After any OBS streaming change.

New Hope Lutheran Church AV Tech - YouTube Live Interface Setup and Rebuild Guide

	redacted	
Thumbnail folder	Back up monthly Proclaim thumbnail images	After monthly thumbnails are prepared.
Description template	Save in church documentation folder	After template updates.
Sunday placeholder checklist	Printed or digital operator checklist	After procedure changes.
YouTube Studio screenshots	Documentation folder with private data redacted	After final setup verification.
Backup rule After any successful Sunday with changed YouTube, OBS, Stream Agent, thumbnail, or description setup, update the backup records before experimenting again.		

18. Troubleshooting

Symptom	Likely causes	Checks / fixes
OBS cannot connect to YouTube	Wrong server URL, wrong stream key, internet issue	Check OBS Settings -> Stream. Confirm internet. Confirm stream key from secure record.
YouTube does not go live when OBS starts	Auto-start off, wrong placeholder, wrong stream key	Open YouTube Live Control Room and confirm auto-start and stream key selection.
Stream goes to wrong event	Wrong key or reused wrong scheduled stream	Verify the scheduled placeholder and selected/custom stream key.
Viewers do not see current service	Placeholder not created, private, wrong channel, or wrong website link	Check Manage tab, visibility, and the church website live URL.
Viewers see thumbnail but no live video	OBS not streaming or YouTube not receiving data	Check OBS stream status and YouTube Live Control Room preview/health.
YouTube does not stop after service	Auto-stop off or OBS still sending data	Confirm OBS has stopped streaming and auto-stop is on.
Wrong thumbnail appears	Wrong file selected from monthly folder	Replace thumbnail in YouTube Studio before going live.
Live chat appears unexpectedly	Chat left enabled	Edit stream customization and disable chat for future streams.
Comments unavailable after stream	Comments disabled or restricted	Check YouTube comments settings and channel policy.
Stream key exposed in screenshot	Documentation/security mistake	Delete/redact the screenshot and regenerate documentation. Rotate key if exposure risk is real.
Public live URL shows old content too long	Placeholder timing or website URL behavior	Review Sunday morning placeholder creation timing and verify the live URL after saving.

19. Items to capture later with screenshots

This document is complete enough to guide a rebuild, but it should later be improved with actual screenshots from the working YouTube Studio and OBS setup. Redact stream keys, passwords, account recovery details, and private account information.

- YouTube Studio main page showing where livestream setup begins.
- Create -> Go Live entry point to Live Control Room.
- Live Control Room Manage tab showing scheduled stream area.
- Schedule Stream dialog showing placeholder creation.
- Stream Details page showing title, description, date/time, and visibility.
- Thumbnail upload area showing where the Proclaim image is selected.

- Stream Settings page showing stream key selection with actual key hidden.
- Auto-start and auto-stop switches showing required On state.
- Customization / live chat setting showing chat disabled.
- OBS Settings -> Stream page with stream key redacted.
- Church website livestream button showing the one-button viewer path.

Appendix A - Configuration record sheet

Configuration item	Expected value / note
YouTube channel name	New Hope Lutheran Church Regina - confirm exact channel name.
Public live URL	https://www.youtube.com/@NewHopeLutheranChurchRegina/live
YouTube Studio account	Record securely outside this document.
Stream key name	Record securely.
Actual stream key	Store securely only; never publish in public docs.
OBS profile used for live streaming	NHLC live - confirm exact name.
OBS service setting	Custom or YouTube - confirm current working value.
OBS server URL	Confirm current RTMP/RTMPS URL.
RTMP or RTMPS	Confirm current working protocol.
Thumbnail folder path	C:\ChurchAutomation\YouTube_Thumbnails\YYYY-MM Month\ - confirm actual.
Description template location	Record current file/folder path.
Normal Sunday placeholder creation time	Record final operating practice.
Normal OBS stream start time	Approximately 9:55 AM if still current.
Normal service time	10:00 AM if still current.
Auto-start	On.
Auto-stop	On.
Live chat	Off / not used.
Comments	Accepted unless church policy changes.

Appendix B - YouTube / OBS / Stream Agent interface map

System function	YouTube / OBS object touched	Reason
Create Sunday placeholder	YouTube scheduled live stream	Creates the public waiting page and event.
Upload thumbnail	YouTube stream thumbnail	Shows the correct service image before live video begins.
Enter description	YouTube stream metadata	Gives viewers service

		information.
Select persistent stream key	YouTube stream settings and OBS stream key	Connects OBS output to the correct YouTube live event.
Start Stream	OBS streaming output; YouTube auto-start	OBS sends data; YouTube starts public event when configured.
Stop Stream	OBS streaming output; YouTube auto-stop	OBS stops data; YouTube ends public event when configured.
View Live button	Public YouTube live URL	Lets operator verify viewer-facing page.
Website livestream button	Public YouTube live URL	One-button access for viewers.
Future placeholder automation	YouTube Live Streaming API liveBroadcast and liveStream resources	Would create and bind placeholders programmatically.

Appendix C - Sunday placeholder checklist

Check	Required result
Correct YouTube channel/account	Confirmed.
Correct Sunday scheduled placeholder exists	Yes.
Title/date/time	Correct.
Thumbnail	Correct Proclaim image for the Sunday.
Description	Current service information included.
Visibility	Public for real service.
Stream key	Persistent/custom key matching OBS.
Auto-start	On.
Auto-stop	On.
Live chat	Off / not used.
Comments	Accepted unless church policy changes.
Website live button	Shows expected waiting-page thumbnail.
OBS profile	Correct live profile, such as NHLHC live.
OBS not already streaming by mistake	Confirmed before planned start.

Appendix D - Glossary

Term	Meaning in this system
YouTube Live	The public platform that receives and distributes the church livestream.
YouTube Studio	The creator control area used to schedule and manage live streams.

Live Control Room	The YouTube Studio interface used for livestream setup and monitoring.
Placeholder	The scheduled YouTube Live event before OBS begins sending video.
OBS	Open Broadcaster Software, the encoder and production app.
Encoder	Software or hardware that compresses and sends live audio/video to YouTube.
Stream key	Secret YouTube value that identifies and authorizes the stream.
Persistent stream key	Reusable stream key kept the same from week to week.
RTMP	Real-Time Messaging Protocol, a common livestream transport.
RTMPS	Secure/encrypted RTMP.
Auto-start	YouTube starts the scheduled event when OBS starts sending data.
Auto-stop	YouTube ends the scheduled event when OBS stops sending data.
Thumbnail	Still image viewers see before the livestream starts.
Proclaim	Church presentation software used for slides and thumbnail creation.
LiveBroadcast	YouTube API term for the live event or placeholder.
LiveStream	YouTube API term for the incoming video stream/feed.

Appendix E - References

These sources were used for general YouTube behavior. Local New Hope values come from the AVTECH project records, Stream Agent III sd configuration, and current church operating practice.
